

BDO IN UKRAINE OFFERS CYBERSECURITY SERVICE FOR CORPORATE NETWORKS

[Reputable sources](#) points that total number of cybercrimes due to COVID-19 pandemic has increased by enormous x7 times! These statistics include both well-known social engineering regarding infiltration into corporate system and more dangerous ransomware attacks focus on data encryption and further blackmailing for redemption by cryptocurrency.

At the same time, increased use of cloud solutions and remote services multiplies the opportunities for attackers. And if previously it was more difficult to penetrate the network (because there were usually fewer access points), in today's environment the attack perimeter is far more extensive due to many devices and services used off-site.

If you company or business:

then, most likely, your corporate network needs to be monitored for existing cybersecurity vulnerabilities.

CYBERSECURITY VULNERABILITY SCORING

WHAT IT IS?

Universal solution for corporate business to determine attack surface from the WEB, examine security and industry standards compliance, and identify potential data leaks.

HOW IT CAN HELP YOUR BUSINESS?

To be aware of all potential cybersecurity vulnerabilities that could be used by attackers.

To mitigate found vulnerabilities and thus radically narrow potential attack surface from the Web.

BDO IN UKRAINE OFFERS CYBERSECURITY SERVICE FOR CORPORATE NETWORKS

HOW DOES IT WORK?

Using AI algorithms of ImmuniWeb Platform, the professional Discovery application investigates actual level of current cyber threats and vulnerabilities of corporate network by:

inspecting 250+ types of digital and IT assets (e.g. APIs, WEB, Domains, Network, Code, Cloud, Mobile Apps, Databases, Software, etc.)

monitoring publication of private information on 2500+ DarkWeb sources (e.g. hacker forums where data is traded)

checking for compliance with 1000+ safety and compliance standards (e.g. PCI DSS, GDPR, NIST, etc.)

WHAT IS THE RESULT?

- 1 Integrated report on the current state of the company's cybersecurity vulnerabilities, including:**
 - *chronology of incidents that have occurred (e.g. phishing, planned attacks, information leaks, etc.)*
 - *list of compromised logins and user passwords (that are already in the public access for attackers)*
- 2 Ability to respond quickly to the most critical vulnerabilities and to plan actions to improve cybersecurity**
